OBJECTIVE

Fourth-year IT student at the University of San Jose - Recoletos with strengths in system analysis, web development, and cybersecurity. Built web systems through a capstone project, an AI powered attendance system, and a food ordering system, and handled QA testing for a deployment decision support research tool, with hands on work in use case modeling, database design, and secure application development. Seeking an internship where I can apply these skills to real projects while learning from experienced professionals.

EDUCATION

Bachelor of Science in Information Technology
University of San Jose - Recoletos, School of Computer Studies — 2023 - Present

SKILLS

- **Languages:** JavaScript, TypeScript, PHP, Python
- **Systems Analysis and Database:** Use case diagrams, database design
- **Cybersecurity:** Kali Linux
- **Frontend:** Angular, ReactJS, HTML, CSS
- **Backend:** Node.js, Express, Laravel
- **IoT and AI:** MQTT, OpenCV
- **Tools & Design:** Git, GitHub, Figma, Canva, Power BI

PROJECTS

TapSakay: Jeepney Passenger Demand Signaling and Automated Seat Monitoring System:
Capstone Project. June 2025 to Present

- Built the commuter role of a system that lets passengers signal demand to jeepneys and tracks seat availability automatically, using Angular and Node.js
- Implemented the commuter's real time demand signaling over MQTT, fixed a feedback loop in the demand handler, and designed database changes for per route waiting passenger counts
- Prepared the use case diagrams and some of the system analysis documents

AI Powered Attendance System: Software Engineering group project. Facial recognition attendance for schools that stores face embeddings instead of raw images. Built with Node.js, Express, and MySQL.

- Produced the system analysis and design documents, including a use case diagram, class diagram, use case descriptions, and a layered client server architecture
- Built Express API endpoints for student registration, face recognition, and attendance logging

- Applied security and privacy measures: role based access for admin, teacher, and student, prepared statements against SQL injection, session timeouts, and no raw face images stored, in line with the Data Privacy Act of 2012

Simple Food Ordering System: Alliance group project. Web based food ordering application with a ReactJS frontend and a PHP REST API backend.

- Developed the PHP backend for registration, login, menu browsing, cart, and order placement, with validation for email format, password length, duplicate accounts, and item availability
- Implemented token based authentication with 24 hour expiry and admin only role checks on menu and order management endpoints
- Designed the data model for customers, carts, menu items, orders, and order items, saving prices at checkout so past orders keep their original totals
- Built admin endpoints for menu create, update, and delete, and for tracking orders through Pending, Preparing, Ready, and Delivered

Academic Deployment Decision Support System: Research project. Web based tool that helps schools choose between cloud and local deployment of an academic information system. Built with HTML, CSS, and JavaScript.

- Handled the QA and testing part of the research project
- Tested the five step input flow and the feasibility, risk, and cost outputs for errors

SENTRY Room Monitor: IoT final project. Room monitoring system that streams camera feeds, detects motion, and flags activity outside scheduled class times. Built with Express, Python, OpenCV, and MySQL.

- Built the frontend pages for secure login, dashboard, activity logs, and admin settings using HTML, JavaScript, and Tailwind CSS
- Implemented the login screens for both ID and password sign in and face recognition sign in, connected to the Express API
- Connected the dashboard and logs pages to backend endpoints for motion events and statistics, with log clearing and logout
- Built the settings page for uploading room schedules from CSV and managing administrators

CERTIFICATIONS & AWARDS

- Introduction to Cybersecurity, Cisco Networking Academy (Oct 2026)
- Introduction to Google Cloud Platform, Simplilearn SkillUp (Oct 2026)
- Fundamentals of Database: What is SQL?, Simplilearn SkillUp (Oct 2026)
- 1st Runner Up, SCS Days Hackathon 2026, organized by the School of Computer Studies and sponsored by Full Scale, 2026. Team entry with the TapSakay jeepney demand signaling and seat monitoring prototype
